- Store_Event_Meeting_Resources
- Store_Registration_Validation
- Expanded event resource functionality
- Updated modal window design for meeting resources and 'send email' functionality.
- Modified Web Category display to auto-expand and highlight that category if you link directly to it.
- Added additional style sheet references to event display options.
- Modified GetRegClassByEvent to not require record status to be 'A' (Active) for member pricing. Price is calculated on member type alone.
- Updated Telerik controls to latest version for best compatibility with newest browsers and increased performance.
- Event resources will now display in sort order defined in Event Resources.
- Optimized resize.aspx to speed up image loading.

RESOLVED ISSUES

- Corrected issue where member type, category, status or chapter changes for a person from the time they login in until they process dues. The Marketplace will now refresh the latest information from iMIS at the time of dues process, which may be different from than what it was when they first entered.
- Corrected issue where 'Remove from Cart' was not displayed if the title of the product had a single quote in it.
- Elongated the security code field wider for and full of all 4 digits in the box.
- Corrected issue on shipping screen when the default country in the database was not United States.
- Corrected issue with image not displaying correctly when there was a tilde (~) in the URL.
- Corrected issue where Featured Events would show multiple times if you had more than one entry in the Store_Featured_Events table.
- Improved performance of Featured items on initial page load.
- Corrected issue with kits not showing on backorder.
- Corrected issue that allowed the sale of non-active, non-stock items.
- Enlarged display of credit card security field to 4.
- Modified payment process to properly display error when an order cannot be created for a \$0 product due to a problem in iMIS.
- Correct issue with setting paid thru dates on subscription records.
- Corrected issue where 'Remove from Cart' message would not display if the title of the item has a single quote in it.
- Corrected issue with SUBPRODUCT_TEXT not appearing during dues renewals/joins.
- Corrected issue with re-emailing receipts.
- Modified 'Add to Calendar' so that it will truncate descriptions so that the total URL length does not exceed 2000 characters and produce an error.
- Modified product detail page as it was rendering thumbnail image but never displaying it. This will improve performance on that page.
 - Adjusted default style sheet to right justify number fields in cart.
