

we can solve it.

ATS ONLINE MARKETPLACE RELEASE NOTES

VERSION: 2014.06

ENHANCEMENTS

General

- Implemented 'Use Company Pricing'. When 'Use Company Pricing' is enabled in iMIS, orders and registrations will be charged at the company's customer-type rate for any individuals linked to the company.
- Implemented receipt subject line masks. This feature allows different subject lines to be generated when receipts and confirmations are emailed to customers.
 - New General Lookup/Validation table: STORE_RECEIPT_SUBJECT_LINES
- Increased performance in image thumbnail processing.
- Updated modal window design.
- New Store_Settings:
 - IntSearchRecordsPerPage - this new setting controls how many records per page are returned in a search. Searches are now shown in a paginated format with page number, next page and previous page indicators. Discontinued use of IntMaxSearchResults and MaxSearchResultsMessage settings.
- Added a feature to send an email to the 'errorsto' address in the appSettings.config file when a PayPal void occurs on a transaction.
- Added support for http and https in links in receipts.
- Added 'Immediate Add to Cart' functionality to add items into the cart from a hyperlink.
- Added to the description that all kits should have at least one "product" in them even if they are a kit of events.

Events

- Title and Company field will now collapse when registering someone else instead of being hidden if they are designated to not display.
- Added quantity and removed event title to function listing for registrations in the cart.
- Added event title and date to registrations displayed on the myorders.aspx page.

Billing

- Added new field to ATS_DUES user-defined table - PROFILE. This field will store the name of a SQL view that will prevent people from continuing through the dues process. The view needs to contain two fields: ID and NOTE. The ID is the ID that is no longer eligible to continue and the NOTE is the message they will see.
- Implemented Criteria field in ATS_DUES table. This field is used to store the name of a SQL view that selects the ID's of the records allowed to use that entry. Mainly used if Member Type/Category/Status combination is not sufficient.
- Added kits of dues products. New General Lookup table: STORE_DUES_KITS

Orders

- Added a method to recognize reversal of electronic orders and Show "Cancelled" on My Orders page.
- Added support for https in electronic items.

we can solve it.

RESOLVED ISSUES

General

- Modified batch creation to honor EventSeparateBatch setting in Batch_Settings table.
- Modified batch creation to honor the option to put events in separate batches, even when an event registration was not the first transaction of the day.
- For checkout windows we pass a set of parameters that can be used by the checkout window. Those include BT_ID, ST_ID, SUBSCRIPTION_TRANS_ID, DONATION_TRANS_IDS, DUES_TRANS_IDS, and ORDER_IDS. The parameter BT_ID was spelled incorrectly.
- Corrected dues and orders receipt so that the date would display consistently (MMMM, dd, yyyy).
- Clear security code field when a credit card fails.
- Corrected an issue if there was a cross sell general lookup table (STORE_CROSSELL_EVENT_TO_PROD, STORE_SUBSTITUTE_EVENT_TO_PROD, or STORE_UPSELL_EVENT_TO_PROD) and the product in the description field was not a valid product code, the product page would not display.
- Corrected issue with coupons where a notice would be displayed that items were removed from the cart with the message "Cannot find product".
- Corrected an issue where, if multiple coupons are used and one coupon is invalid, some items were incorrectly removed from the cart.
- Fixed an issue where the search autocomplete would not work when Store installed in root of web site.

Events

- Changed event registration to not show functions using prefix QSTO for registrants if there were no fees for that specific registrant class.

Billing

- Resolved issue where the login button on the Dues page was sending users to the incorrect page, instead of sending them to the login page.

Orders

- Resolved an issue when a product was marked as show on web and was utilizing special pricing would result in an error when searched in the store.
- Changed the search results to show the master product instead of all of the child products, when the child product was the first product in the search results.
- Corrected an issue where ShowProductCategoriesBrief if marked as false would still display on the search results page.
- Corrected an issue where a product that was removed from a web category in iMIS would still show in the search results.

Administrative Portal

- Modified Bridge view pending orders report to not show orders where the order lines quantity was less than 1.
- Corrected an issue where orders under the LMS Bridges would still display as Pending even after successfully submitting the order.
- Fixed issue with double-messaging in the admin portal when impersonating a user.
- Corrected an issue where the export to excel button in the Admin Portal for coupons would not produce a download file.
- Modified the store to properly recognize WebCourseworks settings and products.
- Updated administrative report that reported certification products with categories as invalid.
- Modified bridges to check for isnumeric on uf_2.
- Fix Simlogin to Set GUID Cookie for On Behalf Of Function When CookieEncryptionEnabled=True.
