

ATS ONLINE MARKETPLACE RELEASE NOTES

VERSION: 2014.09.01 & 2014.09.02

we can solve it.

ENHANCEMENTS

General

- Added tracking of Orders.CO_ID and Orders.CO_MEMBER_TYPE for Orders and Events. NOTE: This is not supported for registrations (Events) for iMIS 15.
- Added ability to override the default encoding during the screen scrape by providing an ATS.Utilities.ScreenScrape.CustomEncodingPageId parameter in the appSettings.

Bridges

- Digitec
 - Added ability to record completion status of an activity into iMIS.
- Small World Labs
 - Bridge developed.
- Peach New Media
 - Bridge developed.
- Cadmium
 - Bridge developed.
- Experient
 - Enhancements to support single sign on.
- Digital Ignite
 - Added new method for self-report hours.
- WebCourseWorks
 - Added new method to get profile and demographic data.
- Boxwood
 - Modified bridge to allow additional parameters for SSO filtering.

RESOLVED ISSUES

Events

- Corrected issue with immediate add to cart functionality and multiple events. Previously, if you had more than one event/function code in your URL only the last one was added to the cart. This has been corrected.
- Corrected issue with pagination when using 'Register Someone Else'. This issue corrects using the arrow or page-number buttons when scrolling through a list of people the person logged in is eligible to register.
- Improved speed of 'Register Someone Else' when using custom views.

Orders

- Corrected issue with Your Price not displaying for products that use stored-procedure pricing.

we can solve it.
