

we can solve it.

# ATS ONLINE MARKETPLACE RELEASE NOTES

VERSION: 2017.11.8801

## RESOLVED ISSUES

### General

- Modified Online Marketplace and web services to improve performance when multiple registrations and/or multiple products are in the cart. (CW36387)
- Corrected issues when someone adds items to the cart (especially multiple registrations and products together) but doesn't check out immediately, then returns and adds one of the same product(s) to the cart before logging in resulting in some of the registrations being removed from the cart. Now, only items with the same product code and ship to ID will be removed from the cart upon return. (CW36431)

### Events

- Added explicit check for iMIS version when saving event survey questions. (CW36270)

## ENHANCEMENTS

### General

- Removed credit card type selection from payment process to simplify the checkout and reduce potential for card type/number mismatch errors. The logic now tests the card number entered against all available credit card checksums for validity, and determines the card type automatically based on the checksum the number passes. (CW36061)

we can solve it.
