

we can solve it.

ATS ONLINE MARKETPLACE RELEASE NOTES

VERSION: 2017.13.8821

RESOLVED ISSUES

General

- Modified code to reduce the number of error emails generated when hackers attempt to append things like 'A=0 to URL's. Now no errorsto email will be generated and message will be displayed that there are no search results. (CW36568)

Events

- Corrected issue when saving event question data, either using event questions or event question functions, because the maximum length was not being properly set. As a result it was possible to enter more text than could be saved in iMIS resulting in truncation or data not being properly saved. (CW36850)

Orders

- Corrected issue when a product is set to not sell on web and detail page for that product is called (i.e. from an email) that the product page displayed with no data. Now a 'product is not available' message is displayed. (CW36565)

we can solve it.
