

we can solve it.

ATS ONLINE MARKETPLACE RELEASE NOTES

VERSION: 2017.18.8918

ENHANCEMENTS

General

- Added the ability to specify a long description (up to 255 characters) for billing category (Name.CATEGORY) and/or member type (Name.MEMBER_TYPE) via two new general lookup tables. (CW37399, CW36135)
 - STORE_DUES_CATEGORY_DESCRIPTOR (sic)
 - STORE_MEMBER_TYPE_DESCRIPTION
 - In both tables the code is the code of the category or member type and description is the title to be displayed.
- **Updated administrative portal to display a 'Not Authorized' message for users who are authenticated on the site** but not authorized to access the administrative portal, rather than redirecting to login which was causing a redirect loop for users already logged in. Authorized users of the administrative portal will have the ATSTOREADMIN access keyword set on their user credentials. (CW37014)
- New Store_Setting: ConfigAdminPaymentSourceCode - This is the source code that will be used on an order when using the administrative payment options. The source code must be a valid source code in the SOURCE_CODE general lookup table in iMIS and is defaulted to WEB. (CW36394, CW37400)

RESOLVED ISSUES

General

- Corrected issue where admin payment options did not display for a Store Admin user unless the user has first visited a page in the administrator portal. (CW37119)

Fund Raising

- Modified the Fundraising class to properly handle check payments. NOTE: Source codes are not set on iMIS version 15.1.3 and earlier. (CW37400)

we can solve it.
