

we can solve it.

ATS ONLINE MARKETPLACE RELEASE NOTES

VERSION: 2018.18.9262

RESOLVED ISSUES

General

- Added messaging in administrative portal when adding missing settings from Batch_Settings or Store_Settings. Now when there is text on the page to wait for success or failure and either message is returned when the process is complete. (CW45057)
- Modified default setting for ShowPersonalCoupons to false for new installations. (CW44055)
- Corrected issue with error when ShowPersonalCoupons is set to true and user logged in has no personal coupons. (CW44055)
- Modified personal coupon link to only show if user is logged in and has personal coupons. (CW44077)
- Corrected issue with coupon discount display where coupon discount would not display for multiple combination coupons. (CW44506)
- Corrected issue with multiple cart coupons causing the application pool to crash. In addition, increased performance of the coupons when multiple coupons are in the cart. (CW44508)
- Added logic to support creating the first web category in the administrative portal when no web categories exist. (CW44468)

Events

- Added new report in the Administrative Portal to look at the entries in the Store_Event_Timezone_Override general lookup table. This report will show the valid entries for the server and any entries in the general lookup table that are not valid. Invalid entries can cause the registration page to not display. (CW44829, CW45056)
- Modified event registration page to show functions with a sort sequence under 1000 as radio buttons instead of checkboxes. (CW45058)
- Corrected issue with a question that is not required that has been answered, added to the cart, and then answer deleted before checking out. (CW44284)

we can solve it.
