

we can solve it.

ATS ONLINE MARKETPLACE RELEASE NOTES

VERSION: 2019.23.10216

ENHANCEMENTS

General

- Upgraded Bootstrap to version 4.1.3. (CW51832)
- Added ability to import coupons via webservice. Please contact ATS for assistance with this utility. (CW51198)
- Modified Administrator Payment Options to also include Pay Later (Purchase Orders). When a customer is impersonated from the administrative portal and the Staff Only Administrator options are enabled staff will see the purchase order button to allow for a product purchase or registration without payment. (CW52057)
- Added coupon description to Coupon_Use activities. (CW51301/CW50765)
- Added a modal 'Add to Cart' window. Anytime someone adds an item to the cart a popup will display with the mini-cart and options to continue shopping, view cart/checkout or pay now. (CW51835)
- Implemented one-click check out for \$0 items. Customers with items in their cart that have no fee and do not require shipping or tax will be presented with a button to immediately checkout. After clicking the place order button, they will see the receipt. This is an excellent option for free PDF documents or free webinars. (CW51844)
- View Cart button will now be disabled when no items are in the cart. (CW51843)
- Enhanced searching for people at a company when paying dues and registering others. As you type in the search box the names are quickly filtered to only show first and/or last names in the search. (CW51833)
- New Store_Setting
 - lblErrorText – This is a text entry that will display a note when an error occurs. The default text is: A copy of this error has been sent to the administrator. If this occurred during checkout, please contact the office before resubmitting your payment. (CW51836)
- Added option to force scrape to TLS 1.2. (CW52113)
- Improved performance through caching. Settings from the general lookup tables were pulled once per session but now they are pulled once per application start. This means that they will be read and held in memory until the application pool recycles. This also means that any changes by staff need to be followed by a recycle the application pool for the Marketplace. (CW51831)
- Created a collapsible panel to calculate tax when a product is not shippable but is taxable. (CW51857)
- Significant changes were made throughout the Marketplace to improve accessibility. Labels were modified to tie to the text box or input object. (CW51834)
- Added a new column in the administrative portal under Setup>>Financial on the review batch settings page to confirm that the gateway name is in the web.config file. (CW51839)
- Buttons - Buttons are now styled with bootstrap classes. The expectation is that navigation buttons will have a class of "btn btn-primary" and other buttons on the page will be "btn btn-secondary". If a button previously had a class then that class will be appended to the bootstrap class. (CW51830)
 - Button classes

we can solve it.

Dues – Add Join/Renew	btn btn-primary TextButton addbutton

- Image Whitelisting – Implemented support for image whitelisting to ensure no malicious attacks can happen through image URL's. (CW50233/CSW50314) **NOTE: Images that do not have an entry in this table will display as broken links.**
 - New General Lookup Table: `ATS_Image_Handler_Whitelist` – this general lookup table will contain the prefixes of URL's for images displayed for products and events in the Marketplace. For example, if an image URL is set to <https://sandbox.atsol.org/store/images/nophoto.png> the entry in the Gen table would be:
 - Code: 1
 - Expansion: blank
 - Description: sandbox.atsol.org
 - You can whitelist an entire domain (sandbox.atsol.org) or you can restrict it even further to something like `sandbox.atsol.org/images`. If it is a relative URL (i.e. `/images/nophoto.jpg`) then enter a URL of `/images` in the general lookup table.

02		sandbox.atsol.org/images		

Billing

- New Store_Settings
 - ConfigDuesCouponsIncludeVolItems – True/False setting. If set to true, dues coupons will include VOL items for dollars off and percentage off coupons. When set to false, VOL dues items will not be discounted when a dues coupon is used. The default for this setting is false. The only is applicable when there are no product code or product category restrictions on the dues coupon. (CW51850)
- Header Display in Dues – these 3 new Store_Settings will control the display of the header when someone is joining or renewing. (CW51370/CW50954)
 - lblDuesBillingCategory – This is a label that prefaces the dues billing category. If the label is blank or the billing category on the record is blank, this line will not display. Default value is 'Current Billing Category'.
 - lblDuesMemberType – This is a label that prefaces the member/customer type. If the label is blank neither the member type nor label will display. Default value is 'Current Member Type'.
 - lblDuesPaidThroughDate – This is a label that prefaces the paid through date. If the label is blank or the paid through date is blank, this line will not display. Default value is 'Last Paid Through Date'.
- Added a message that displays when a member already has one or more dues items paid. This is a generic message that they are not eligible and to contact the office. (CW51847)
- Made significant design changes to the dues wizard to make it more consistent and easier to read/use. Also, increased performance when searching to pay someone else's dues. (CW51849)
- Added a message to display when a person has no options to join and no catchall row exists in the ATS_DUES table. (CW51848)

Events

- Implemented bulk registration. Events with only one function and no questions will display a list of people the logged in person is eligible to register that they just check a box by each person's name and add all registrations to the cart. (CW51854)
- Modified display of multi-line questions to be more mobile friendly. (CW51853)
- Modified event display tabs to use Bootstrap for event detail tabs. (CW51852)

we can solve it.

(p) 720.945.7252
(f) 720.945.7253
www.atsol.org

Donations

- Improved layout of donations page. (CW51851)

Administrative Portal

- Added administrative interface to check dues options for an ID. Added a new menu item under Dues which will allow you to enter an ID number and see which rows in the ATS_DUES table the person is eligible to join or renew for. This will be helpful in determining why someone cannot join or renew. (CW51838)

RESOLVED ISSUES

General

- Corrected issue with being able to enter more than 40 characters in the purchase order field on the payment screen. (CW51300/CW50269)
- Corrected issue where you could not create a coupon for over \$1000 in the administrative portal. (CW51280/CW51248)
- Corrected Issue with Google Analytics that was not providing all information at checkout. (CW51837)
- Improved reporting of AutoDraft licensing in the administrative portal. (CW51840)

Billing

- Corrected issue with due proration when percentages were resulting in amounts that are a fraction of a penny. (CW52352)

Events

- Corrected error with receipts and confirmation letters for cancel/transfer registrations. (CW52156)
- Corrected issue when multiple registrations were in the cart and Google Analytics is enabled. (CW52534)

Orders

- Corrected issue when an item in a kit was on backorder that the kit was not showing as on backorder. (CW51845)

Administrative Portal

- Corrected issue that would not allow you to view all coupons in the Manage Coupons area. (CW51915)
- Updated list of optional general lookup tables under Setup>>Verify that can be used by the Online Marketplace. (CW51841)
- Corrected issue when you had a standard Order category and a web category with the same name that would display duplicate categories on the store homepage. (CW51846)
- Modified text that reported whether the Marketplace credit card demo mode is set to true or false under Setup>>Verify. (CW51842)
