

we can solve it.

ATS ONLINE MARKETPLACE RELEASE NOTES

VERSION: 2019.39.10566

ENHANCEMENTS

General

- Deprecated the ErrorsToEmail entry in the appSettings.config file. New functionality includes modified error reporting. **Please refer to the Staff Email Notifications and Error Reporting section of the user's guide for setting up these important changes.** (CW54447)
 - New Store_Setting
 - LblBridgeNotSyncedMessage – this text setting is the message that will be displayed when a transaction that is linked to a bridge does not sync. Default: Access to your content is not available at this time.
- Improved credit card checkout functionality by pre-filling the customer's name, address and postal code. Also, the cursor will be focused on the full name field, which is the first field on the page. (CW54378)
- Improved Bootstrap Implementation – in a handful of cases we were using the bootstrap row class without an outer class of container. Those have been corrected. One change was made to the core stylesheet for .storewrapper .fullcart .row. (CW54304)

Billing

- Added caching on the initial dues.aspx page. If specific data is required for joining or renewing and a member logged in, went to the Marketplace dues.aspx page, then updated their profile to change the required data element, the dues.aspx page was not cached and didn't recognize the data change. Now, each time a person goes to that page it will be cached to refresh all of the data from the record. (CW54560)

RESOLVED ISSUES

Billing

- Corrected issue to correctly set mid-year additions when a member has multiple primary dues items. (CW54374)
- Corrected issue when determining renew eligibility when a member has multiple primary dues items. (CW54376)
- Corrected issue where dues products with special pricing and proration, when proration was a percentage, was being doubled. (CW54548)
- Corrected issue to sync paid through dates to primary dues item when adding a new subscription. (CW54373)

General

- Modified specials to display if there are no current specials regardless of what the Store_Setting ShowSpecials is set to. (CW54448)

we can solve it.
