

we can solve it.

ATS ONLINE MARKETPLACE RELEASE NOTES

VERSION: 2019.48.10662

ENHANCEMENTS

Billing

- Pre-select Member Type When Starting the Dues app – a member type can be pre-selected when initiating the dues.aspx page by appending the member type to the URL. If you specify a member type on the query string, and the person is eligible for that membership, the option will be pre-selected, and the next button will be clicked. For example, if a person clicks on a link to join as a student, and the student member type is STU, you can create a link such as this:
<https://yourstore.org/store/dues.aspx?customertype=STU>. This can be useful when used in combination with the Profile and Criteria fields in the ATS_DUES table. (CW55622)
- Dues Product, Sorting, and Grouping – this new feature allows for better control of the join/renew process. 25 new Store_Settings will allow you to control the sort order and grouping on the screen. There are unique settings for dues products by product type (CHAPT, SEC, MISC, SUB, VOL). (CW55509)
 - New Store_Settings
 - Chapter
 - DuesChaptersIQA - This is the name of an IQA that will have the four columns identified above. If the IQA is not provided, then the SUGGESTED and SORT_ORDER will not be used to control the order of the items on the page.
 - DuesChaptersFilterByIQA - This setting is only applicable if the IQA is provided. This value can be TRUE or FALSE. If TRUE, then any product codes in the “other” section will only be shown if their product code is in the IQA. If their product code is NOT in the IQA the item will not be shown. This will allow you to have another filtering mechanism for people who join or renew other than the billing cycle. This will let you have the same billing cycle for two people but show different product codes based on the rows in the IQA query.
 - lblDuesChapterSubscribedText - This is the text for a header that will show at the top of the SUBSCRIBED/SELECTED section of the display.
 - lblDuesChapterSuggestedText - This is the text for a header that will show at the top of the SUGGESTED section of the display.
 - lblDuesChapterOtherText - This is the text for a header that will show at the top of the Other text.
 - Sections
 - DuesSectionsIQA - This is the name of an IQA that will have the four columns identified above. If the IQA is not provided, then the SUGGESTED and SORT_ORDER will not be used to control the order of the items on the page.

we can solve it.

 - Subscriptions
 - DuesSubsIQA - This is the name of an IQA that will have the four columns identified above. If the IQA is not provided, then the SUGGESTED and SORT_ORDER will not be used to control the order of the items on the page.
 - DuesSubsFilterByIQA - This setting is only applicable if the IQA is provided. This value can be TRUE or FALSE. If TRUE, then any product codes in the “other” section will only be shown if their product code is in the IQA. If their product code is NOT in the IQA the item will not be shown. This will allow you to have another filtering mechanism for people who join or renew other than the billing cycle. This will let you have the same billing cycle for two people but show different product codes based on the rows in the IQA query.
 - IblDuesSubsSubscribedText - This is the text for a header that will show at the top of the SUBSCRIBED/SELECTED section of the display.
 - IblDuesSubSuggestedText - This is the text for a header that will show at the top of the SUGGESTED section of the display.

- lblDuesSubOtherText - This is the text for a header that will show at the top of the Other text.
- Volunteer
 - DuesVolsIQA - This is the name of an IQA that will have the four columns identified above. If the IQA is not provided, then the SUGGESTED and SORT_ORDER will not be used to control the order of the items on the page.
 - DuesVolsFilterByIQA - This setting is only applicable if the IQA is provided. This value can be TRUE or FALSE. If TRUE, then any product codes in the “other” section will only be shown if their product code is in the IQA. If their product code is NOT in the IQA the item will not be shown. This will allow you to have another filtering mechanism for people who join or renew other than the billing cycle. This will let you have the same billing cycle for two people but show different product codes based on the rows in the IQA query.
 - lblDuesVolSubscribedText - This is the text for a header that will show at the top of the SUBSCRIBED/SELECTED section of the display.
 - lblDuesVolSuggestedText - This is the text for a header that will show at the top of the Other text.

Products

- Individual electronic products can now have expiration days by adding the product code to the Store_Etypes_Expiration_Days general lookup table. The product must already be configured as an electronic document. (CW55737)

RESOLVED ISSUES

General

- Corrected issue with the Store_Setting, ShowProductCategoriesBrief that was causing error when searching when set to true. (CW55309)

we can solve it.
