

we can solve it.

ATS ONLINE MARKETPLACE RELEASE NOTES

VERSION: 2020.16.10839

ENHANCEMENTS

General

- Improved performance of searching when using auto-fill text (Store_Settings.ShowAutoTextBoxSearch) (CW57996)
- Added support for ACH payment via enSYNC Blue Pay. Transactions with ACH will be all SALES transactions. (CW56803)
 - New Store_Settings
 - PaymentACHProvider – ATS provides support for many ACH providers. The default value will be PAYFLOWPRO. The valid providers are:
 - PAYFLOWPRO (Default) – This is PayFlow Pros's implementation of ACH that uses Telecheck. Based on the value of PAYMENTTELECHECKTYPE, this will either be handled as a SALES transaction or an Authorize/Delay capture transaction.
 - AUTHORIZE.NET – This is Authorize.NET's implementation of ACH. This uses an Authorize/Delay capture solution and can void transactions when iMIS fails.
 - BLUEPAYENSYNC – This is the setting to use for BluePay when using the AISP enSYNC's Blue Pay Integration. This only supports a SALES transaction at this time. It will void transactions when iMIS fails.
 - PaymentACHTestMode – (TRUE/FALSE) When set to true, ACH requests will be sent to the provider in test mode. This only applies to BLUEPAYENSYNC. PAYFLOWPRO and AUTHORIZE.NET manage the test/live mode through the setting of the gateway url (e.g., pilot-payflowpro.com)
 - Modified the PaymentTelecheckType – can be set to a 1 – SALES Transaction, or 2, AUTHORIZE/DELAY CAPTURE transaction. Previously this was being applied to Authorize.NET and now it only applies to PAYFLOWPRO. Default value is 2.

RESOLVED ISSUES

General

- Corrected issue where the Store_Setting PaymentCCShowStreetAddress true/false setting was not being honored when set to false. (CW58396)

Billing

- Corrected issue when dues products have a prerequisite and the parent product is removed during a renewal to also remove the child products. (CW58200)
- Corrected issue that was stopping people from renewing that had a payment plan. (CW58139)
