

we can solve it.

# ATS ONLINE MARKETPLACE RELEASE NOTES

VERSION: 2020.36.11190

## RESOLVED ISSUES

### Orders

- Improve performance when using stored procedure pricing for products. When using the Store\_Product\_SP\_Pricing general lookup table the stored procedure is called once instead of each call of the webservice. (CW61401)

### General

- Correct issue with View Cart and Checkout buttons when the remove from cart notice is displayed. (CW61431)
- Corrected issue with addtocart.aspx functionality where it was allowing a quantity of more than one electronic document in the cart. Now, if an electronic document is added to the cart more than once a message will display that only a quantity of one is allowed. (CW61400)

we can solve it.
