

we can solve it.

ATS ONLINE MARKETPLACE RELEASE NOTES

VERSION: 2021.02.11394

ENHANCEMENTS

Products

- Modified the product detail page (detail.aspx) to help with performance when attacked by bots. The product detail page allows for the passing of a querystring for the product code. In some cases, bots have tried, unsuccessfully, to append nefarious code to that querystring. If the querystring is longer than 31 characters a product not found message is immediately displayed to help with CPU performance. (CW63746)

General

- Update Coupon_Usage activities. Modified how maximum uses are incremented when there are more than one coupons with the same name. Modified incrementing the Times Used So Far field only once when applied to multiple items in one transaction. Implemented Max Uses Per Coupon for Subscription coupons. (CW64001)

RESOLVED ISSUES

Events

- Hide login error message when login required and lblEventLogin Store_Setting is blank. (CW63801)
- Modified 'Register Someone Else' functionality to require at least one function with a Sort Sequence under 1000 and only allow eligible registrants to register. (CW63808)
- Force registration selection for events where no functions start with 'REG_'. (CW64002)
- Corrected issue to not display empty alert tag after correcting validation error on registration forms for required selections. (CW64003)

Billing

- Update Online AutoDraft integration with new software from enSYNC. (CW63813)

General

- Improve error trapping when processing payments. (CW63819)

Bridges

- Web Courseworks: Corrected issue when Web Courseworks is not setup correctly the errors reported were incorrectly stating that the WCEA bridge is not configured. (CW63766)

we can solve it.
